

Actions We Are Taking to Keep You Safe

Thank you for your patience as we navigate safe home health care delivery during the coronavirus outbreak. Providing safe, attentive home care has always been our priority and that has never been more true than now. Our team is following enhanced safety precautions to lessen the spread of COVID-19 and ensure the care our patients receive is safe.

Clean, Protected Equipment:

All equipment used is cleaned after each patient is treated.

Facemasks:

Facemasks are worn by all care staff and provided to patients, if needed, during the home care visit.

Vigilant Hand Hygiene:

Hands are cleansed and gloves are changed before and after each patient visit.

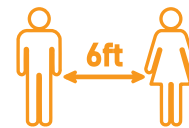

Visit Schedules:

Patients who are immunocompromised are seen early in the day; patients with COVID-19 are scheduled later in the day to limit exposure risk.

Screening Practices:

Visiting staff self-check temperature and symptoms before each work day; patients are screened before each visit.

Social Distancing:

Observed throughout the home visit, except as needed for care delivery.

Feel free to call your health care professional with any questions or concerns. We are here for you.
